

Still Applications For Town Property

Offer For House And Lots at Last Council Meeting

A postponed meeting of the Town Council was held last Monday evening. Mayor Wells occupied the chair and councilors Champ, Brylie, Cox and Broughton were present.

After the reading and adoption of the minutes a letter was read from Laidlaw & Co. on behalf of E. E. Roth, who drilled a test well here, asking that since Mr. Roth had decided not to drill any more test wells here, he be relieved from any further responsibility, and that the agreement between him and the town be forthwith cancelled. The letter was laid over for investigation.

A letter was read from Mr. McEwen regarding property previously owned by him. The letter was filed.

A letter offering \$100 for property near the old rolling mill, was read. The offer was rejected and a price of \$140 was placed on the property.

Another offer was received for a building north of the Redcliff hotel and the old shoe factory. Both these were rejected as the price offered was not considered enough.

A letter asking for the price of the old house building on Fifth street and another offering \$400 for a house on Fifth street were both referred to the building committee.

The local Legion wrote making an offer for the building on third street previously owned and occupied by the R. R. Stinner Co., to be used for club purposes, to replace their Memorial hall recently destroyed by fire. The matter was laid over till the next regular meeting of council which will be held next Monday evening.

On motion of councilors Brylie and Champ Mr. Wm. Henderson was appointed receiving offers for the 1928 town elections for councilors and school trustees.

Moved by councilor Broughton, seconded by councilor Brylie that the secretary-treasurer be authorized to have 100 copies of the auditor's report printed for the ratepayers' meeting, and also to engage hall for the meeting which is to be held on Friday January 25th. Carried.

The usual monthly accounts were read, and on motion of councilors Broughton and Champ were approved for payment.

Several applications to rent houses at present owned by the town, were received and read, of which were set for same.

Solicitor Bird reported that, as instructed he had written Sir Henry Thornton regarding the completion of the Houns branch of the Canadian National railway into Redcliff. Sir Henry wrote acknowledging receipt of the letter and stating that the completion of this line was at present under consideration by the officials.

FARMERS URGED TO

SECURE THEIR SEED OATS

Farmers throughout the province are being advised by the provincial Department of Agriculture to make the necessary provision for securing the supply of oats for seed which they will require for their 1929 crop. The effects of frost in a number of districts are reflected in the reduction of germinating quality of a great many of the oats threshed and in a number of cases, supplies of oats suitable for seed will have to be shipped in. Farmers are urged to make arrangements to secure the seed they require to plant in the distribution of good seed, and farmers are advised to consult with their local elevator agents as early as possible in order to obviate the possibility of a scarcity of seed during the seeding season.

Redcliff Dogs Win At Calgary Show

Champs' Wire-haired Bracco Carry off Eight Prizes

Dogs from the H. Champ and Son kennels here in Redcliff, made a very close run of prizes at the dog show in Calgary. In all their wire-haired dog and bitch won eight prizes.

"Redcliff Warriors" won first prize for the best dog in his class and "Redcliff Frickie" the first for the best bitch in her class. The two firsts for the best bracco at the show and also a special prize. "Warriors" won second in the open dog class and "Frickie" second in the open bitch class. Both were reserve winners in their respective classes.

We congratulate the local breeders on the excellent showing made. We understand Mr. Champ and his son, being going extensively into the breeding of this breed of dogs, and are informed they have one of the best trained in Winnipeg and the Pacific coast.

New Agreement Out For Natural Resources

Omnia Clause Referring to Section 17 of Alberta School Act

The text of the new agreement whereby the natural resources will be placed under the province, has been made, but little discussion has been held of it yet. There are a few changes in the new agreement, the most important of which is the mailing of any reference to section 17 of the Alberta School Act, which caused a delay in the transfer three years ago.

No C. N. R. Branch Line To Redcliff No

Resident Views Stating He Cannot Include Amount in Estimates

Sir Henry Drayton wired the Mallin-Hat Council this week saying: "I regret it will not be possible to include in our budget the necessary amount to construct a line into Mallin-Hat this year."

This has reference to the long delayed building of the branch line of the Canadian National from Hanna to Redcliff. During the past few months there has been concerted action between Mallin-Hat and Redcliff to have this line completed this year.

JANADA NOT ACCEPTING THE U. S. WAVE LENGTHS

The department of Marine and Fisheries has given permission to the Houns provincial government broadcasting station CKY to step up its power to 5,000 watts. This is taken as an indication that Canada is not accepting the allocation of wave lengths in the long wave band recently made by the United States federal radio commission. Of the ninety-five channels in this band in this continent, this commission allotted to Canada six exclusively and 11 others were shared.

ANNUAL MEETING GIRLS' W. A.

The annual meeting of St. Ambrose Girls' branch of the W. A. was held at the Vearagion Tuesday evening when reports were presented and officers elected. Doris Halverson was chosen vice president and Phyllis Sanderson secretary-treasurer. Mrs. Cooper, vice president, acted as President. After the meeting some refreshments were served before leaving.

After her serious illness, King George is now reported to be out of danger and making satisfactory progress towards recovery.

Joint Installation of I. O. O. F. and Rebekahs

Was Held in Cliff Hall Here Wednesday Evening Last

The joint public installation held on Wednesday evening, January 9th, between Redcliff Lodge, No. 98, I. O. O. F. and Vega Rebekah Lodge No. 95, proved to be a most enjoyable affair.

Not only to the local brothers and sisters, but also to the visitors, Bro. Taylor, of Medicine Hat, D. D. G. M., and sister Maxworthy, D. D. P., of Medicine Hat, installed the officers into their respective offices as follows: J. P. G. W. Palmer, N. G. H. E. Lepard, V. G. W. Hill, Rec. Sec. J. R. W. Cann, P. G. Treasurer—A. T. Stratton, P. G. Chaplain—E. T. Cook.

Warren—R. Fairhurst, Conductor—E. Schmidt, P. G. R. S. N. G. H. J. Dett, P. D. D. G. M. L. S. N. G. B. Moore, P. G. R. S. V. G. H. L. Jensen, L. S. V. G. H. O. Anderson, L. S. S. M. T. Jones, L. S. S. M. McCleary, D. G. H. J. Joske, I. G. M. J. Kellist, P. G.

For Vega Lodge No. 95, the following officers were installed: J. P. G. Margaret Stratton, N. G. Susan Kerr, V. G. Sae Emma Cann, P. M. Sec. Clara Attenbuck, Treasurer—Peggy Patterson, Chaplain—Jesse Palmer, Warner—Nadia Learmonth, L. S. S. N. G. Nellie Learmonth, P. D. D. P.

L. S. N. G. Robina Cathers, I. G. W. G. Elizabeth Mathews, P. G. L. S. V. G. Dorothy Kitchen, O. G. W. A. Stratton, P. D. D. P. L. C. W. J. Moore, On, P. J. Gladys Sheldon. After the installation ceremony all

to the number of 1200 enjoyed an excellent supper catered to by Mr. H. Champ. On behalf of the officers and members of the two lodges we extend to him hearty appreciation of the splendid manner in which he looked after this part of the program.

The following program was then rendered, Bro. R. Cann, P. G. acting as chairman.

The King, Community singing, Toast to Grand Lodge, proposed by C. T. Hall, P. G., and responded to by R. Schrader, P. G. M. Violin solo by E. T. Cook, accompanied by N. Learmonth. Toast to the district proposed by C. Buchholz, P. G., and responded to by D. D. G. M. Bro. Taylor, T. Jones and M. McCleary then sang a duet with a duet. A pleasant feature of the evening was the presentation of a P. G. Jewel to sister Stratton by sister Maxworthy, D. D. P.; also to sister Maxworthy by sister Learmonth. P. D. D. P. as a slight token of regard from Vega Lodge. A reception from B. J. Dett was also very much enjoyed by all present. The Ladies and Visitors were not forgotten. This toast was left in the capable hands of P. Hain, P. G. and was responded to by sister Maxworthy and B. Cope of Medicine Hat replied for the visitors. Bro. Wm. Henderson, P. G., who has served nearly fifty years in the ranks of Oddfellowship, also gave an address. The singing of Auld Lang Syne brought this very successful event to a close.

SOME OTHER PEOPLE

The turn of the Chinese policeman's lip seems to indicate that he could snarl out a very nasty "Where do you think you're going?" if he thought you were understanding him, but passengers on the Canadian Pacific World Cruise last year found him very courteous.

Some time before the photo-triplet met the man with the pudding-bowl head-pier they were greeted at the entrance of the famous Stadium at Athens by the fiery-mustached guard who looks like Harry Lauder in a military uniform of the Hapsburgs. The Latin and the heavy advertisement national costumes.

But the Japanese practicing of the emperor's ancestor takes the case when it comes to strange head-gear. A pan could be made here about "wicker" and "wicker-looking," but let that pass. The dark representatives of the far east evidently believe in simplicity of costume—and economy! She has made her "rule de style" serve for her "rule de vie," and her head dress! For many years have probably been amongst the old family secrets handed down from mother to daughter for centuries.

Taking them altogether they are a fair sample of strange sights to be viewed on a trip round the world.

The Canadian Pacific has organized six winter cruises this year. Round the World by the "Empress of Australia," South America/Africa by the new 10,000 ton "Duchess of Athol," Mediterranean by the "Empress of Scotland," and three cruises to the most happy hunting grounds of the business—the West Indies.

Churches

ST. AMBROSE CHURCH

Rev. J. L. Cooper
Sund. Sunday after Epiphany, Jan. 13
Holy Communion at 8 a. m.
Sunday School at 10 a. m.
Matins and sermon at 11 a. m.
Evangelist; and sermon at 7:30 p. m.
Monday, Jan. 14th, annual parishioners' meeting, 8 p. m. at 8 p. m.
Thursday, Jan. 17th, Sunday School Teachers' meeting 7:30 p. m.
Friday, Jan. 18th, children's choir practice after school, 7:30 p. m. followed by choir practice.

GORDON MEMORIAL UNITED CHURCH

Rev. W. R. Smith, Pastor
Organizations meet as follows: and to share in the activities of Gordon Memorial Church.
Strangers and visitors are cordially invited to attend the service. The Official Board on 2nd Tuesday in each quarter at 8 p. m.
Committee of Stewards on the 2nd Tuesday of each month at 8 p. m.
Women's Missionary Society on the last Thursday of each month at 3 p. m. Ladies' Aid, every Thursday, 3 p. m. Mission Band every second Monday at 4:15 p. m.

Sunday, Jan. 13th, 1929.
10 a. m. Church School.

11:15 a. m. Sacrament of The Lord's Supper. 7:30 p. m. Thanksgiving and Prayer.

On Jan. 25th the annual Burns supper and concert will be held. Scots who have the price will be there, and Scots who happen should borrow and be there.

THE U. F. A. CONVENTION

As in former years the Red Cross Society, on the invitation of the U. F. A. will operate a nursery for babies and children who accompany their parents to the annual convention on January 16th.

ST. MARY'S CHURCH

Celebration of Mass, Second and Fourth Sundays of each month at 8:30 a. m.

REWARD WHEAT TO BE DISTRIBUTED TO SETTLE

Two hundred bushels of new "Thorndale" wheat is being distributed among the homestead settlers. Board settlers in the southern half of the province. Each settler is limited to 2 bushels of this wheat for which a charge of \$5.00 a bushel will be made. Very satisfactory results have been secured from the quantity of wheat which was distributed three years ago.

Time Approaching for Municipal Elections

Ratepayers Meeting Called for Friday Evening, January 25th

It is now drawing close, to the time for municipal elections in town. The annual ratepayers' meeting will be held in Cliff Hall on Friday evening, January 25th. On that occasion we propose the usual program will be carried out, when council and school board will review the work of the past year. Opportunity will also, no doubt, be given ratepayers to offer any criticism or make suggestions for the future. There is the possibility of an election for both the council and the school board, as, according to existing regulation two or three members retire from each body each year.

On the town council there are three members who have filled out their term and will either retire or seek re-election. These are Messrs. Campes, Cox and Broughton. Mr. Campes cannot be re-elected as he will not seek re-election. It is altogether likely the other two will again be in the field. The only other name we have heard mentioned as a probable candidate is Wilfrid Campes. On the school board the retiring members are Messrs. Leveille and Boudreau. We haven't heard whether or not they will again be candidates. In the event of an election several names have been mentioned as possible candidates.

As nominations to fill these vacancies will be held the first Monday in February, ratepayers should not leave it till the last minute to select and interview probable candidates.

ST. AMBROSE CHRISTMAS TREE

The annual Christmas Tree and prize giving for St. Ambrose Sunday School was unavoidably postponed until Thursday, January 3rd when a stormy evening somewhat lessened the attendance. Nevertheless a pleasant time was spent in games and recreation, and on Santa's arrival at 8 p. m. the prizes and presents with oranges, candy and nuts, were dispensed to the children present. It was stated that the four gold pins earned for a year's regular attendance by Phyllis Sanderson, Phyllis Taylor, Gladys Taylor and Doris Davies, had not arrived but would be presented on the first opportunity. We could wish that more parents would attend this annual event and encourage their children in their Sunday school work.

The Ladies' Aid of Gordon Memorial will hold their Burns' supper in the church on Friday evening, Jan. 25. Supper will be served at 6:45.

WILL YOU PAY THE WAGES OF A FAITHFUL WORKER?

EVERYONE can have one tireless employee and none other will ever be able to do so much for you.

A Savings Account regularly and faithfully paid will bring financial independence and all that goes with it.

Take stock of your income now, at the turn of the year, and resolve to pay your Savings Account as regularly as you pay the rent.

IMPERIAL BANK OF CANADA

Buttermaking On The Farm

General Quality Of The Product Could Be Raised By Raising Better Cows

There are still a great many farmers who are not within reach of a well-informed creamery, and as a result they make their own butter. This results in a variable product that tends to lower the quality of the whole output. The main defects in dairy butter as compared with creamery butter are bad flavor, staleness, too many shades of color and unentire packages.

To get the best results in farm dairy work it is necessary to have the first place to have good cows, liberally and properly fed, and their cream skinned should be about 30 per cent fat and kept cool. The churning temperature should be about 55 degrees Fahrenheit. The churning temperature should be about 55 degrees Fahrenheit. The churning temperature should be about 55 degrees Fahrenheit.

Quite often a package sells an article, and butter is no exception. A neat, clean, attractive package will attract the consumer, and result in sale. A clean and attractive dairy is an essential. Bacterial bacteria made on many farms but the general quality of this butter could be raised by the exercise of more care, which would result in a greater consumption and greater returns for the farmer on all butter marketed.

Water and the Farm Well

The Shallow Well Is the Source Of The Greatest Danger

Residents in rural districts as a rule have reason to congratulate themselves that they are not near a well. Without any particular proof, they think the water from these wells is pure. In the majority of cases it is, but it is better to be sure than sorry. If the water has never been tested it ought to be and the Dominion Department of Agriculture, through its Division of Chemistry, offers a service which is free. Instructions on collecting and shipping samples will be supplied on application to the Department Farm, Ottawa.

The waters of Canada's lakes, streams, and springs are of the purest. The danger lies in local sources of contamination. The farmer who locates his well beyond the possibility of local contamination and puts down a deep drilled or bored well, largely solves his own problem. The source of the greatest danger is the shallow well, from five to thirty feet deep, which merely collects ground water, the package from the surrounding soil.

Had Sense Of Humor

Nansen Told Of Good Fun Made By Eskimo

The Arctic explorer, Fridtjof Nansen, says that among all his experiences it remained for an Eskimo to give him the biggest surprise of his life. The man actually made a pun and not a bad pun, either.

Nansen had come upon one of the little coastal ice huts, called igloos, in which three people live, and addressing the occupant in the English dialect, he said:

"I suppose you will stick pretty close to home this winter."

"Yes," said the Eskimo in good English, without a trace of a smile, "I guess myself here until spring comes."

Strange things are happening this year. Recently we saw the headline, "Eggs rally after break."

A man who is clever enough to be boss at home is also wise enough not to brag about it.

"This car has eight cylinders, four-wheel brakes, water-cooled—
"That does not interest me. My wife wants a pearl grey car with a nice view of flowers and fitted with wireless."—Homer Hunter, Madrid.

W. N. I. 1764

Lindberg Has New Air

Fully Equipped Office As Well As Living Quarters

A flying office to be used for the transaction of business while en route from city to city has been built at the Stout metal airplane division of the Ford Motor Company for the use of Colonel Charles A. Lindbergh and Major Thomas G. Lamplugh.

The office, a tri-angled aluminum monoplane, first will be used in the preliminary ground layout work, incident to the establishment of airports along the route of the Transcontinental Air Transport, Inc. This enterprise co-operating with the Pennsylvania and Santa Fe Railroad systems, and others, has under way a combination airplane and train service between New York City and Los Angeles.

The office plane has sleeping facilities, stenographic quarters and other special features. In the section to be devoted to the office a metal desk has a letter file incorporated on one side and the usual desk drawers on the other. A stenographer's table with typewriter and minor office appliances is included.

The interior includes six deep upholstered chairs, three of which have adjustable backs, so that they may be used as Morris chairs or fifty-fifty. The built-in berths are for naps during flights. One is built above the other just out of the "office." A refrigerator, built-in, will keep food fresh while en route.

The cabin is luxuriously trimmed. The interior paneling consists of layers of aluminum sheets with balsam-wood between. The panels are one-quarter inch thick and weigh only six and three-quarter ounces for the square foot.

All equipped the plane includes fresh air being taken into a special line through the exhaust stacks and into the cabin. The wing spans is seven feet eight feet from tip to tip and the length of the plane is five feet.

World's Largest Subway

New Electricity Closes In London

The largest underground "tunnel" in the world is the new electricity line, London's underground station, described by the mayor of Westminster. A large gathering inspected the structure and pronounced it a marvel of engineering and architecture.

Seven entrances lead from the street to the new station which is capable of handling 300,000 passengers annually. This is double the capacity of the old station. The "bookings hall" is circular. It has a floor space of 15,000 square feet and is a third of a mile in circumference. It is surrounded by shops with attractive show-windows.

This "booking hall," is only 15 feet below the surface. It is connected by eleven moving stairways with a vast underground railway system built on three levels and centralizing all subways of the city.

Inspection Of Meat

Campaign To Safeguard Meat Supply Of Dominion Is Being Waged

An unrelenting campaign to safeguard meat supply of the Dominion, is being waged by the federal department of agriculture, according to figures released by the inspection division at Ottawa.

Inspection was conducted in 36 packing establishments during the last fiscal year. The total inspection of 1,150,000 cattle, 610,000 sheep, 2,600,000 swine and 208,000 poultry.

Of the cattle inspected 1.59 per cent. were condemned, while the percentage for swine and sheep was 0.7 and 0.38, respectively.

"The importance of meat inspection is apparent," the report states, "when the volume of the per capita consumption of meat is realized. Beef amounts to 68.76 pounds, pork, 63.43 pounds, mutton and lamb, 6.11 pounds and poultry, 6.69 pounds."

Girls Excel In Swimming

Girls are more apt at learning to swim than boys, according to a report of the Education Committee of the London County Council. During last year 156,649 school children had lessons, and 45,272 had learned to swim by the end of the year.

A Handy Watch

The slightest movement will serve to wind up a particularly sensitive watch invented by a Lancashire watchmaker. If it is worn continuously, a "free wheel" prevents it from overwinding.

Elk Island Park Buffalo

Here Has Been Reduced By 500 Head On Account Of Lack Of Space

A gratifying feature of Canada's adventure in bringing back the buffalo is the way in which the different herds continue to multiply and to expand beyond the capacity of their simple enclosures. The case of the main herd at Watnigwag, Alberta, in which there was an increase from about 700 head to 17,000 head in eighteen years has often been cited. This year 1988 young buffalo were sent from Watnigwag to the Wood Buffalo park near Fort Smith, Northwest Territories, and of the herd at Elk Island Park, two hundred animals have been slaughtered, and their carcasses and hides disposed of commercially. That two hundred buffalo could be disposed of without any great outcry is a fact to be wondered at. When the original herd was purchased from Michael J. O'Brien, it was to be taken to receive them. Seventy miles of stout wire fencing, such as encloses the Buffalo park at Watnigwag, could not be erected overnight and the herd was sent to the park to be received there. Seventy miles of stout wire fencing, such as encloses the Buffalo park at Watnigwag, could not be erected overnight and the herd was sent to the park to be received there.

Barnyard Manure

Increases Yield and Lowers Cost Of Production

Applying all the manure made on the farm at the right time and in the right place lessens man labor, increases yields per acre, and lowers cost of production per ton or bushel. Manure should be hauled to the field day by day from fall to spring, and if the snow is not too deep, distributing it in small piles through the fields. Handling in this manner is an economy in manure, labour, and time. Manure piled in the barnyard results in a loss of plant food and humus forming material, which will go into the soil if the manure is handled as suggested.

The chief losses in piled manure around the buildings are soluble nitrogen and potash compounds. Organic matter with its nitrogen is also destroyed through fermentation, or heating as the action is usually called.

It has been found that manure in large heaps or piles, in the course of the three coldest months January, February and March, lost chiefly enough excessive heating 60 per cent of its organic matter and nearly 30 per cent of its nitrogen.

The loss has been proved by much experimental work carried on by the Department of Agriculture, at Ottawa, that unless there is special reason to believe that manure, sooner or later gets stale manure will still fresh into or onto the soil the best of the mainline No. 25, and the Publications Branch of the Department, which covers the whole subject of manures and fertilizers, states that fresh manure is better suited for heavy soils while rotted manure is best for sandy loams.

North Lays Its Penman

Buffalo Meat Makes Hearty Meal

For Out-Of-Door Men

The North may be changing and retreating, and what not, but it still loves its penman. Two hundred buffalo are to be slaughtered at the Elk Island park soon, and the carcasses will be made into pemmican and triple-smoked meat for use of the hardy rangers of the barren lands.

Trail shipments of this old western delicacy added a tasty dish to northern dinner tables last year, and this year, the shipments will be bigger. Good pemmican lasts for ever without loss of flavor, and is small compact it provides a hearty meal for out-of-door men.

Heavy Grain Shipments

The flow of grain through Canadian terminals has greatly exceeded last year's record. Shipments from the head of the lake from the opening of the present crop year up to nearly the middle of October exceeded last year's figures by more than two-thirds, while shipments from the Pacific Coast ports have been nearly eight times as great.

Doctor—I hope your master's temperature is much lower today than it was last night. Butler—No, it is not. I am sure about that, for he died this morning.

A boll in the pot is worth two on the neck.

Most Powerful Locomotive In World

al. Railways and now placed in service. The locomotive weighs 600,000 pounds and is designed to operate fast passenger and freight service where speed and power are required. Its new design of operation and economy are features of this new monarch of the rails which marks such an evolution in the history of transportation that engineers believe it will prove to be the successor to the steam locomotive. It is capable of carrying longer trains over greater distances with less fueling than any type of locomotive now in use. The power developed by the oil engine is converted into electric energy by the generator and then transmitted to the traction motors geared to the driving axles in the cab window of the lower photograph is by C. E. Brooke, Chief of Motive Power of the Canadian National Railways who is largely responsible for this new locomotive.

Larder Well Stocked

Packed with meat to a height of one foot, a space which measures eight inches in width by ten feet in length was found between the walls of a shop being demolished at Hamilton, New Zealand. It was found that the larder when a company of grocers occupied the premises.

"What do you think of your job?" "Just First of all I have to tie down, and then I have got up and wipe away the sweat."—Sundag-Sundag-Sundag.

W. N. I. 1764

Using Scales On Cows

Cow-Testing Is the Logical System For The Dairyman

Cow testing is a simple plan of testing out just what return each cow makes for the feed and labour supplied on her. It is a common-sense, logical system, for every dairyman needs to know definitely, judging by actual weights, not by ordinary external appearances, which are his best cows, and also what profit each cow makes. The principle at the base of building up a good dairy herd must always be, make each cow in the herd pay a good profit.

The monthly yield of any cow can easily be calculated by weighing and recording the milk on at least three days per month, at intervals of two days, as the 1st, 11th, and 21st, both morning and evening. Samples should be taken of each of the six milkings and kept in a numbered bottle, with the milk preserved for testing once a month to learn the percentage of fat in the milk. Each cow should be numbered and have her own sample bottle. The total of the weights, multiplied by ten, gives the yield in ten gives very closely the yield of milk for the month. The yield of fat can be found by multiplying the total by one hundred. Thus if the six weights on the three days are 16 and 14, 14 and 14 and 14, the total, multiplied by ten, gives 80, which is the calculated yields of milk for the month. The total of the weights, multiplied by ten, gives 80, which is the calculated yields of milk for the month.

According to Circular No. 30, "Cow Testing," of the Department of Agriculture, at Ottawa, it is better for many reasons to weigh the milk daily, morning and evening. Froth in dairying depends upon each cow in the herd. It is not fair to charge the loss from one or two poor cows against the profit from five or six good cows.

Poultry Breeding

Definite Plan Must Be Followed To Secure Success

The live stock breeder knows that he will not get very far in his business unless he breeds well bred stock, and further in breeding such stock he must know exactly what he is doing. If he wishes to correct some defect in individuals he selects birds that are liable to give him progeny that does not have the particular defects he is trying to correct. The whole science of breeding is for a very definite plan, and there is now no groping in the dark. Farmers no longer believe that the colour of their barn influences the colour of their calves.

The poultryman has of late years been gradually developing the value of breeding to his stock. This refers to the breeder whose chief concern is eggs. The farmer has of course always been a scientific breeder. The introduction of Registration and Record Performance for Poultry has not only made it a definite pedigree breeding footing. Matings cannot be made to reproduce with any degree of certainty the desirable characteristics required unless there is available very accurate information regarding the performance of the parents and their ancestors. Complete history is necessary to intelligent mating.

The poultryman who is anxious to commence pedigree breeding will get many helpful suggestions from Bulletin No. 101, of the Dominion Department of Agriculture new series, entitled "Poultry Breeding Records," prepared by Mr. George Robertson, and now available for distribution.

Most Powerful Locomotive In World

al. Railways and now placed in service. The locomotive weighs 600,000 pounds and is designed to operate fast passenger and freight service where speed and power are required. Its new design of operation and economy are features of this new monarch of the rails which marks such an evolution in the history of transportation that engineers believe it will prove to be the successor to the steam locomotive. It is capable of carrying longer trains over greater distances with less fueling than any type of locomotive now in use. The power developed by the oil engine is converted into electric energy by the generator and then transmitted to the traction motors geared to the driving axles in the cab window of the lower photograph is by C. E. Brooke, Chief of Motive Power of the Canadian National Railways who is largely responsible for this new locomotive.

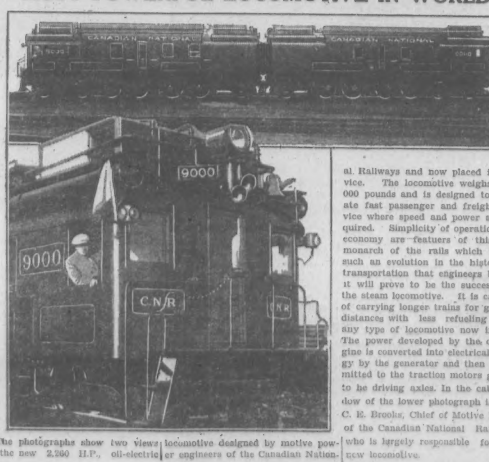

Larder Well Stocked

Packed with meat to a height of one foot, a space which measures eight inches in width by ten feet in length was found between the walls of a shop being demolished at Hamilton, New Zealand. It was found that the larder when a company of grocers occupied the premises.

"What do you think of your job?" "Just First of all I have to tie down, and then I have got up and wipe away the sweat."—Sundag-Sundag-Sundag.

W. N. I. 1764

MOST POWERFUL LOCOMOTIVE IN WORLD

The photographs show two views of the new 2,360 H.P., oil-electric locomotive designed by motive power engineers of the Canadian National Railways and now placed in service.

Interesting Local Items

A company is being formed in Medicine Hat for the purpose of dredging along the river for gold.

A. Light, of Riches, Sask. is spending this week in town visiting his sister, Mrs. H. Bangle.

E. F. McManis, who conducted a jewelry store in Medicine Hat for a number of years died suddenly last Sunday.

The social committee of the local Legion are putting on a dance in Club hall on Thurs. night, Friday, Jan. 25, after the regular meeting.

L. Olson, of Dand, was a business visitor in town yesterday.

John L. Reid received word last week that his father, Edward Reid, was seriously ill at his home in Medicine Hat. The father is still in a critical condition.

One dollar invested in a year's subscription to the improved Family Herald and Weekly Star of Montreal will bring the farmer better dividends than one hundred dollars in the bank. The farmer's wives, daughters and sons get free, the best magazine extant.

Ken Horne and Gus Bond, two former hockey players from this district, are the stars on the Oakland, California, hockey team this season. Between them they scored all the goals in a game against Los Angeles this week. Horne learned the game in Redcliff and at one time Bond was a star on the Medicine Hat team.

In a few days the movement of Alberta coal to the eastern market at the special rate of 6.75 per ton will commence and be in operation for six months.

Calgary Canadians defeated the Monarchs hockey team in Medicine Hat last Friday evening 2 goals to 1.

Heating Lang, M. L. A. for this constituency, was before coming to Medicine Hat, principal of the Regina high school. Last Thursday Mr. Lang attended a banquet in Regina, given in his honor by the young men who attended Regina high school during the time Mr. Lang was principal. There were 100 members of the school board at that time.

The whole Dominion is talking of the great improvement in the Family Herald and Weekly Star, Montreal. After a year of three years for \$2.50 is the farmer's highest dividend paid for investment, and the family circle gets with it the best of all magazines free.

CANADIAN WESTINGHOUSE

Westinghouse Radio

Suits Canadian Conditions

THE Radio Set that lacks in sensitivity is useless in many parts of Canada. In the Westinghouse Receivers sensitivity has been developed to the full possibilities of present day Radios. More than that, the 6 tube Westinghouse Models have power in abundance—reserve power to bring in the very distant stations with clarity and reasonable volume. Extraordinary sensitivity is the result of the combined laboratory engineering of Westinghouse Radio and Radiotron Engineers to create the perfect radio receiver for Canadian conditions.
